

Designed to withstand adverse weather, drop arm awnings operate by using concealed springs in the arms to extend the awning. This creates a larger area between the awning and window enabling greater air flow.

Control harsh sun conditions and uncomfortable heat with a manual gearbox, or the option of full motorisation. A weather box is recommended if motorising.

#### Features and Benefits:

Extra Heavy Duty T6 Aluminium Bottom Rail

Heavy duty Aluminium Spring Loaded Arms

80mm Aluminium Top Tube

Aluminium Brackets

Options: Weather Box, Crank Handle  
Bottom Valance available

#### Standard Extrusion Colours:
